

JMS

Setup

1. Install Java 11
2. Open the project with IntelliJ Idea
3. In the Run/Debug configurations run:
 1. Run `ActiveMQ`, two pupups will appear, click `Run` and `Continue Aniway`
 2. Run `Receiver`
 3. Run `Requester 1`, `Requester 2` or `Requester 1`

Notes

- Messages are encoded in this JSON format.

```
{
  "name": "Holland Express",
  "color": "#238F1B",
  "question": "Is the ticket #12 for sale?",
  "response": "Yes, it is."
}
```

- It is possible to start multiple Requestor applications, each one will have a random name and color.
- The `Ask Ask` button will send the message in another channel.
